

CARE INSTRUCTIONS FOR FIVE GUYS FURNITURE

WOOD FINISH:

All Five Guys wood furniture, signs and paneling are finished in high performance, 2 part conversion polyurethane which is commonly used in high-end institutional environments. When properly cared for this finish will last well beyond your next refresh. 2K Polyurethane has excellent resistance to foods, beverages and common cleaning chemicals.

- Basic care consists of just a damp cloth with warm water.
- Mild polish may be applied once per month but please be sure it is a reputable non-silicone polish.
- If soap is required please use a mild soap and avoid cleaners with abrasives, as they may scratch the finish.
- Do not allow cleaners containing ammonia to come in contact with your furniture finish as the finish may deteriorate and become milky over time.
- 2K Polyurethane offers a very hard mar-resistant surface, but like any membrane finish it may still be scratched or damaged if not cared for properly. In the event the finish gets scratched there are simple polishing techniques you can do yourself (please refer to our training video). If damage is excessive, please call your customer service representative to schedule maintenance or replacement.
- For heavy duty cleaning due to scuff marks, grease and mop grime use natural citrus solvent on a damp cloth and rub in the direction of the wood grain. For regular scuff removal use only original Magic Eraser or Genuine Joe Chemical-Free Sponge and rub in the direction of the wood grain.

METAL CHAIR, STOOL, AND TABLE FRAMES:

Metal chair, stool, and table frames have a very durable powder coated finish.

- Clean using a damp cloth with warm water. Use a mild, non-abrasive soap for heavier duty cleaning. Avoid solvents, harsh detergents, and abrasive pads.

LEATHER CUSHIONS:

Booth cushions are covered in full grain leather.

- For cleaning use damp soft cloth with a mild soap or leather cleaner. Wipe dry after cleaning.
